PROFESSIONAL SUMMARY

Enterprise Solutions Architect and Automation Lead with extensive experience modernizing enterprise infrastructure and engineering scalable, end-to-end automation pipelines. Proven track record of architecting secure, autonomous multi-agent systems and leveraging the Google Gemini ecosystem to eliminate operational bottlenecks, optimize data workflows, and deliver measurable ROI. Combines decades of deep systems engineering and compliance leadership with modern generative AI protocols to build resilient, self-healing enterprise solutions.

TECHNICAL PROFICIENCIES

- **AI/ML & Agentic Orchestration:** Google Gemini API, Gemini AI Studio, Multi-Agent Systems, Agentic Protocols (MCP/A2A), Semantic Embeddings, n8n
- **Automation & Pipelines:** Python, n8n, Node-RED, Apache NiFi, Robotic Process Automation (RPA), Selenium, PowerShell, RESTful APIs
- **Databases & Vector Storage:** PostgreSQL (pgvector), Elasticsearch, SQL Server, Oracle, MongoDB, Redis, SQLite
- **Cloud & Infrastructure:** Google Cloud Platform (GCP), Amazon Web Services (AWS), Docker, Proxmox, VMware ESXi, Linux/CentOS
- **Programming Languages:** Python, Go, C, C++, Java, C#, JavaScript, SQL, Visual Basic
- **Security & Compliance:** DISA STIG, DITSCAP, DODAF, DIACAP

WORK EXPERIENCE

Senior Automation Architect

ConvergeOne | June 2016 – May 2024

- **Engineered High-Throughput Triage Pipelines:** Architected ETL data pipelines moving enterprise event streams from SQL Server into Elasticsearch. Built Python-based semantic analysis and alert-classification algorithms that resolved alert noise and fully automated IT ticket routing.
- **Designed Telephony Automation & Validation Frameworks:** Engineered Java-based automated testing architecture utilizing the Avaya DMCC library alongside RESTful monitoring systems on Linux/CentOS to validate complex voice infrastructure changes, enforce functional baselines, and guarantee 24/7 reliability.
- **Built Automated Deployment & Compliance Solutions:** Spearheaded Robotic Process Automation (RPA, Automation Anywhere, Python) workflows and server configuration scripts (PowerShell) for Avaya IXM installations. Authored custom utility wrappers to automate long-term security log retention and ensure continuous audit compliance.

Technology Consultant

Hewlett-Packard Enterprise Services | September 1995 – June 2016

- **Process Automation & Performance Optimization:** Re-engineered legacy OBIEE reporting processes using automated scripting, slashing report rendering times from 25 minutes to 2 seconds and reducing enterprise storage requirements by 75%.
- **Strategic Enterprise Architecture & Compliance:** Partnered with government and enterprise stakeholders to architect secure IT solutions, ensuring full alignment with DISA STIG standards and strict federal security postures.
- **Legacy Modernization & Technical Migration:** Advised senior leadership and cross-functional engineering teams on migrating mission-critical legacy architectures; developed sandbox testing protocols, custom discovery utilities, and comprehensive framework guides to ensure zero-downtime application relocations.
- **Cross-Functional Solution Engineering:** Led technical delivery teams in designing and deploying full-stack automated tools using C#, PowerShell, Visual Basic, and SQL Server, bridging complex business requirements with technical execution across 30+ concurrent projects.
