PROFESSIONAL SUMMARY

Visionary AI Automation Expert and Solutions Architect with over 40 years of success leading digital transformation and modernizing enterprise infrastructure. High-utility developer specializing in end-to-end process automation using Python and the Google Gemini ecosystem. Proven track record of architecture secure, autonomous multi-agent systems via Python to eliminate operational bottlenecks and streamline data workflows. Pragmatic strategists are adept at aligning generative AI capabilities with corporate objectives to mitigate risk, maximize ROI, and build scalable, self-healing data pipelines.

TECHNICAL PROFICIENCIES

- **AI/ML & Agentic Orchestration:** Google Gemini API, Gemini AI Studio, n8n, Multi-Agent Systems, Agentic Protocols (MCP/A2A)
- **Automation Frameworks:** Python, n8n, Node-RED, Apache NiFi, Robotic Process Automation (RPA), Selenium
- **Databases & Vector Storage:** PostgreSQL (pgvector), Elasticsearch, SQL Server, Oracle, MongoDB, Redis, SQLite
- **Cloud & Infrastructure:** Google Cloud Platform (GCP), Amazon Web Services (AWS), Docker, Proxmox, VMWare ESXi, Linux/CentOS
- **Programming Languages:** Python, Go, C, C++, Java, C#, JavaScript, SQL
- **Security & Compliance:** DISA STIG, DITSCAP, DODAF, DIACAP

WORK EXPERIENCE

Senior Automation Architect

ConvergeOne | June 2016 – May 2024

- **Engineered Triage Data Pipelines:** Built high-throughput ETL data pipelines from SQL Server into Elasticsearch. Developed Python-based semantic analysis algorithms powered by Python to automatically classify enterprise infrastructure alerts, resolve noise, and automate IT ticket assignments.
- **Designed Telephony Automation & Validation Systems:** Developed Java-based automated testing architectures utilizing the Avaya DMCC library alongside RESTful monitoring systems on Linux/CentOS to validate complex voice infrastructure changes, enforce functional baseline stability, and guarantee system reliability.
- **Built Automated Deployment & Compliance Solutions:** Spearheaded Robotic Process Automation (RPA) and server configuration scripts (JitBit, PowerShell) for automated software installations (Avaya IXM), while authoring custom utility wrappers to automate long-term security retention and satisfy strict audit compliance standards.

Technology Consultant

Hewlett-Packard Enterprise Services | September 1995 – June 2016

- **Strategic Enterprise Architecture & Compliance:** Partnered with government and enterprise stakeholders to architect secure IT solutions, ensuring full alignment with DISA STIG standards and complex government security postures.
- **Legacy Modernization & Technical Migration:** Advised senior leadership and cross-functional engineering teams on migrating complex legacy systems, developing comprehensive framework guides, custom discovery tools, and sandbox testing protocols to ensure zero-downtime application relocations.
- **Process Automation & Performance Optimization:** Re-engineered legacy OBIEE reporting processes using automated scripting, slashing report rendering times from 25 minutes to 2 seconds and reducing enterprise storage requirements by 75%.
- **Cross-Functional Leadership & Solution Engineering:** Led technical delivery teams in designing and deploying full-stack, automated enterprise tools using C#, PowerShell, Visual Basic, and SQL Server, bridging business requirements with technical execution across 30+ concurrent projects.
